Toddlers can find hidden objects in a bowl full of Jello in this fun sensory filled activity.

Materials:
- A large shallow plastic container (it will need to fit in the refrigerator)
- Several boxes of Jello
- Small plastic toys
- Excavation Tools (fork, spoon, shovel, etc...)

Directions:
1. Make one package of the Jello according to the directions on the package. Arrange your small toys in the container. Once your Jello is mixed carefully, pour it over your toys and place the container in the refrigerator to solidify.
2. After your first layer has chilled and is now a gelatin consistency, make a second package of Jello. You can add a few other small toys in this layer as well. Repeat the process of adding and solidifying the Jello until the toys are covered in your container.

4. Once your jello is completely solid, you are ready to begin your Jello excavation! You can find some “tools” to use for your excavation such as forks, spoons, shovels, etc…

5. Now you’re ready to take your Jello outside and begin excavating to find all of the hidden treasures!
